

Design Intent Statement - Water Reticulation

Product: Med Twist – Tilting Louvre Roof and Med Opra – Retractable Louvre Roof
Company: Outdoor Blinds and Awnings Australia (02 8068 9293, www.obaaau.com.au)

Outdoor Blinds and Awnings Australia makes no warranty, representation or guarantee regarding any change in the intended design of the Outdoor Blinds and Awnings Australia Opening Aluminium Louvred Roof Systems.

In relation to the performance of the water reticulation, this will be significantly compromised if water dispersion is taken from a horizontal axis from the gutter profile and not using the Outdoor Blinds and Awnings Australia specified product design intent, this specifically notes the correct dispersion of water from gutter profiles is to be dispersed vertically down from the gutter profile and not horizontally.

If the client does not complete the works or adhere to the Outdoor Blinds and Awnings Australia Water Reticulation Specifications/Design Intent, then a build-up of water, over spray and/or overflow of the water within the internal guttering system may occur.

The required number & size of downpipes spigots within the system is determined in accordance with the AS/NZS 3500.3.

Outdoor Blinds and Awnings Australia does not warrant any leaks, overspray and/or overflow of the gutters when or if the downpipe spigot design, fall in gutters and water dispersion/reticulation is not carried out strictly to the Outdoor Blinds and Awnings Australia Water Reticulation Design Intent.
